Targeted
Clinical
RISK LEVEL
Provide basic education and supports (click through for more information)
• Revisit all universal-based support recommendations as families adapt to new cancer-related stressors
• Identify a "point person" within hospital or community to ensure follow-through
• Refer for short-term hospital- or community-based coping skills training
• Raise sibling concerns to oncology team
• Provide consultation to community providers
• Refer for individualized hospital- or community-based psychotherapy to address symptoms of psychopathology
• Provide medication evaluation as needed
